

“A” Series Variable Displacement Piston Pumps

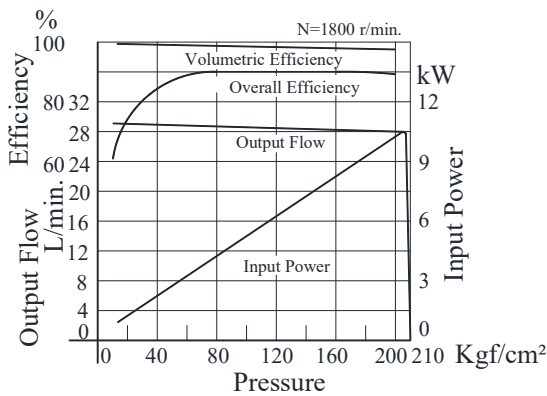

Features

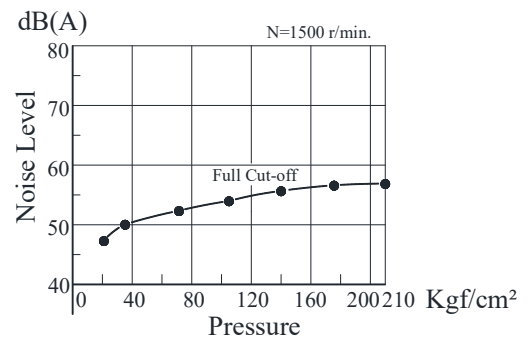

- **High efficiency**
Under the conditions of pressure 160 Kgf/cm² and speed 1800 r/min. volumetric efficiency is over 98% and the overall efficiency is over 90%.

- **Low noise level**
In the “A16” pump, the noise level is as low as 57.3dB(A) [At the full cut-off pressure 210 Kgf/cm² with speed 1500 r/min. at one meter horizontally away from pump head cover.]

“A16” Type performance characteristics

“A16” Type Noise level characteristics

- **Accomplishment of energy saving**
Because the overall efficiency is high and the cut-off characteristics is sharp, thus the input power may be saved.

- **Low heat generation**
Because of small power loss, it is possible to reduce the rise in oil temperature. Accordingly, capacity of a reservoir can be reduced

Instructions

Hydraulic Fluids.

Use petroleum base oil such as anti-wear type hydraulic oils or R & O (Rust and oxidation inhibitor) type hydraulic oils (ISO VG 32 or 46) with a viscosity range of 20 to 400 cSt at temperature of 0-60°C both to be satisfied.

Control of contamination.

Much care should be taken to maintain control over contamination of the operating oil which can otherwise lead to breakdown and shorten the life of the unit. Please maintain the degree of contamination within NAS Grade 10.

The return line must have a line type filter of under 10µm or there should be an offline/independent filtration unit in the system.

Mounting

When installing the pump the filling port should be positioned upwards.

Alignment of Shaft.

Employ a flexible coupling whenever possible, and avoid any stress from bending thrust. Maximum permissible misalignment is less than 0.1 mm TIR and maximum permissible misangularity is less than 0.2°.

Suction Pressure.

Permissible suction pressure at inlet port of the pump is between -0.17 and +0.5 Kg/cm² (-125 mm Hg~+0.5 Kg/cm²). For piping to the suction port, use pipes of the same diameter as that of the specified pipe flange to be used. Make sure that the height of the pump inlet port is within one meter from the oil level in the reservoir.

Hints on Piping.

When using steel piping for the suction or discharge ports, excessive load from the piping to the pump generates excessive noise. Whenever there is fear of excessive load, please use rubber hoses.

Suction Piping.

In case the pump is installed above the oil level, the suction piping and suction line filter should be located lower than the pump position to prevent air in the suction line.

When using steel pipes for the suction or discharge ports, excessive load from the piping to the pump generates excessive noise.

Whenever there is fear of excessive load, please use rubber hoses.

Drain Piping.

Install drain piping according to the chart and ensure that pressure within the pump housing should be maintained at a normal Pressure of less than 1 Kg/cm² and surge pressure of less than 5 Kg/cm².

Length of piping should be less than 1 m, and the pipe end should be submerged in oil.

Recommended Drain Piping Size.

- Fix drain pipe for each side of the pump

Model Number	Fitting Size	Inside Dia. Of Pipe
A Series		
A10,A16,A22	3/8 (Inside dia. 8.5 mm or more)	ø 10 mm
A37, A45	1/2 (Inside dia. 12 mm or more)	ø 12 mm
A56,A70 A90,A100,A145	3/4 (Inside dia. 16 mm or more)	ø 19 mm

Bleeding Air.

It may be necessary to bleed air from pump case and outlet line to remove causes of vibration. An air bleed valve (Model No. ST1004-※-1080) is recommended for this purpose.

Starting.

Before starting, first time fill the pump case with clean operating oil through the fill port. In order to avoid air blockage, when first starting, adjust the control valves so that the discharged oil from the pump is returned directly to the tank or the actuator moves in a free load.

[Volume of Pre-Fill Oil Required]

Model Number	Volume cm ³
A Series	
A10	370
A16,A22	600
A37, A45, A56	1200
A70	2100

A145	3300

Setting Discharge Pressure and Delivery

At the time of dispatch, the unit has been preset to the maximum delivery and minimum discharge pressure. Adjust the preset delivery and pressure to meet your system requirements.

- **Adjustment of Discharge Pressure**
Turning the adjustment screw clockwise, increases pressure.

[Pressure adjusted by each one turn of the pressure adjustment screw]

Model Numbers	Adjustment Pressure Kgf/cm ²
A10-FR01B	29.6
A10-FR01C/H	55.1
A16/A22/A37/A56-※-R-01-B	35.7
A16/A22/A37/A56/-※-R-01-C	66.3
A16/A37/A56/-※-R-01-H	80.6

Control Type

Control Type	Graphic Symbols	Performance Characteristics	Explanation	Page
“01” Pressure Compensator Type			When the system pressure increases and comes close to the preset cut-off pressure, the pump flow decreases automatically while maintaining the set pressure as it is.	24
“02” ^{*1} Solenoid-two Pressure Control Type			This type of control is ideal for an application where the output power of the actuator has to be controlled in two different load pressures while keeping the actuator speed nearly constant.	*
“03” ^{*1} Pressure Compensator With Unloading Type			It is suitable for a situation where a long unloading time is required and heat generation and noise have to be kept at their lowest levels. <ul style="list-style-type: none"> The pump can use in combination with the multistage pressure control valve. 	*
“04” Proportional Electro Hydraulic Load Sensing Type			This is an energy saving type control which regulates the pump flow and load pressure to be at absolute minimum necessary level to operate the actuator. Pump flow rate and cut off pressure are controlled proportional to the input current to the control device on the pump and the input current is regulated by the specific amplifier.	44
“04E” Proportional Electro Hydraulic Pressure & Flow Control Type			This type of control has the pressure sensor and tilt angle sensor in the pump. The pump is used with the external amplifier. Flow and pressure can be controlled in proportion to input voltage by only one control valve. The features has been greatly improved by electrical feedback of swash plate tilt angle correspond to flow rate and load pressure to control valve. <ul style="list-style-type: none"> Linearity of input characteristics is excellent and easy to set. Hysteresis is lower, repeatability and reproducibility are fine 	56
“05” ^{*1} Two-Pressure Two-Flow Control Type by System Pres.			This type of control is suitable for an application like “Presses” where the changeover from rapid advance to feed is required just when the pressing (pressurizing) starts	*

Control Type	Graphic Symbols	Performance Characteristics	Explanation	Page
Two-Pressure Two-Flow Control Type by Solenoid valve “06” ^{*1}			This pump control is suitable for machining found on machine tool, where machining starts after the changeover from rapid advance, to feed has been made.	*
Pilot Pressure Control type Pressure Compensator “07” ^{*1}			The pump is used in combination with the pilot relief valve or multistage pressure control valve. By controlling the pilot pressure, the full cut-off pressure can be remote-controlled according to the requirements.	*
Constant Power Control Type “09” ^{*1}			<ul style="list-style-type: none"> • Pump input power can be controlled in accordance with the motor output. • When the discharge pressure raises, the output flow decreases corresponding to the preset input power. • The pump can act for function of 2 pumps, low pressure large-flow and high-pressure small-flow. Therefore, the motor capacity can be reduced. 	*

* Control Type “01”, “04” & “04E” are shown in catalogue. Contact YUKEN for the details of other control type

^{*1} Please check YUKEN KOGYO.CO.LTD website or catalogue for more details

*1 Whenever setting pressure, make sure the full cut off pressure never exceeds the maximum intermittent pressure.

*2 Care should be taken in case of used at a higher pressure than the rated pressure, because operating terms may be restricted. For example, if used as per maximum illustrated operating conditions, intermittent time at maximum flow is restricted to under 1/5 of one cycle time and under 6 seconds simultaneously. Conditions may vary according to the actual working pressure and delivery (inclination angle of swash plate). Consult factory or Yuken sales representative for further information.

*1 Applicable only for A70/A90/A145

*1 In case of using socket welding flanges, there is a case where the operating pressure should be set lower than the normal because of strength of the flanges. Therefore, please pay cautious attention to the operating pressure when the socket welding flanges are used.

*2 Discharge port for pump model “A16” and “A22” is available only the threaded connections.

- Details of pipe flange kits are described in EIC-L-1001 page no. 722.

Instructions

Bleeding Air

In order to get steadily controlled pressure and flow, bleed air by loosening the air vent screw and fill solenoid armature with operating oil.

Manual Adjustment Screws

Manual adjustment screws may be used for initial running adjustment or in case of electrical failures in order to adjust pressure and flow temporarily. In case of normal use, put the manual adjustment screws back in their preset position.

Position of Cable Departure

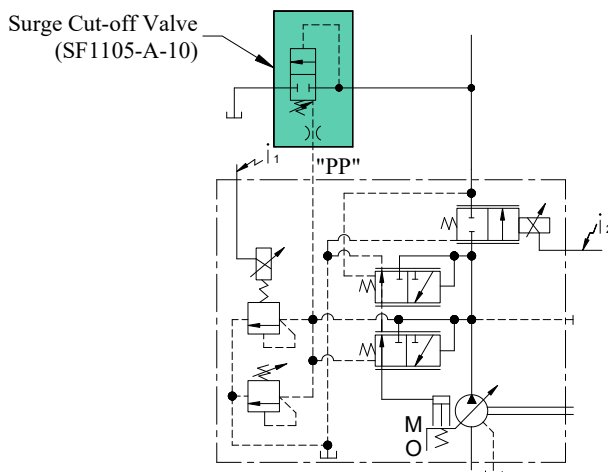

Position of cable departure can be changed. For details, refer to EDG-01 valve in EIC-H-1001 page no. 561.

Connection of Surge Cut-off Valve to “A” Series Pump (For A16 to A56 Type)

If using surge cut-off valve (SF1105-A-10), connect between pilot port “PP” of this pump and port “PP” of surge cut-off valve as pilot piping (refer to drawing below).

Inside diameter of pipe should be more than 8 mm.

Consult Yuken for details of surge cut-off valve.

*¹ Whenever setting pressure, make sure the full cut-off pressure never exceeds the maximum intermittent pressure.
 *² When operating the pump exceeding the rated pressure, operating conditions are restricted. Refer to page no. 24.
 *³ For detail specifications of power amplifiers, refer to EIC-H-1008 page no. 695.
 *⁴ The figure mentioned in the above table are those obtained using Yuken's amplifier.
 *⁵ Step response depends on circuit and operating conditions. Data shown in the table above is an example based on the condition right.

- *1 Whenever setting pressure, make sure the full cut-off pressure never exceeds the maximum intermittent pressure.
- *2 When operating pump exceeding the rated pressure, operating conditions are restricted. Refer to page 24 on Catalogue No. EIC-A-1002 for the details.
- *3 Maximum flow differs to shaft speed. The value listed above indicates shaft speed of 1800 r/min. For other shaft speed calculate by the ratio of shaft speed.
- *4 To secure the required minimum pressure, special sequence valves are available, to be directly installed at the discharge port of the pump. Consult Yuken for details.

Pipe Flange Kits

For pipe flange, refer to form of pressure compensator type in page no.25 on Catalogue No. EIC-A-1002.

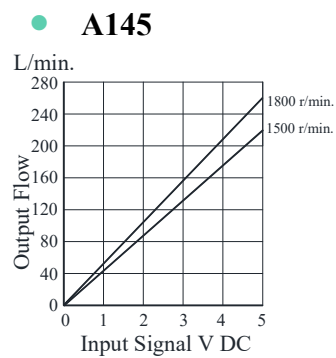

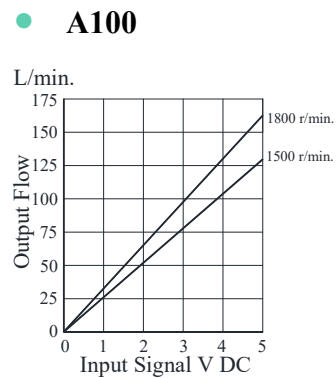

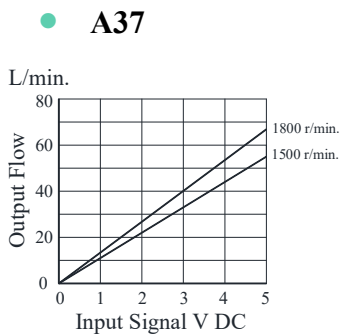

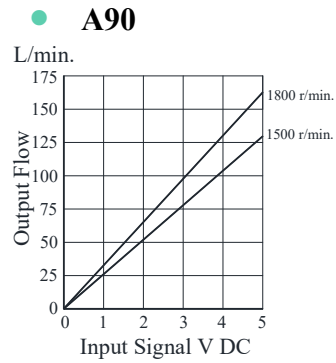

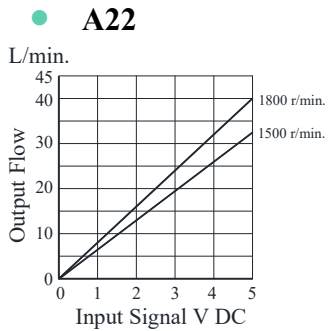

Instructions

- **Input Signal**
The pump is on unload condition when the pump is operated without input signal voltage.
- **Electric Source**
Always turn off electric source whenever the connector for swash plate tilt angle sensor is removed.
- **Compensation of pump Maximum Regulated Flow at Frequency**
If the same maximum flow is required at 50 Hz or 60 Hz, connect short plug in the amplifier to 60 Hz at the place where supplied frequency is 60 Hz. At this condition, maximum flow comes to the same value at 50 Hz. If short plug is used at 60 Hz without making the change, maximum flow increased in proportion to frequency.
- **Painting on AMP. BOX and Solenoid**
To Maintain suitable radiation effect, the amp. box and the solenoid of the control valve should not be painted.

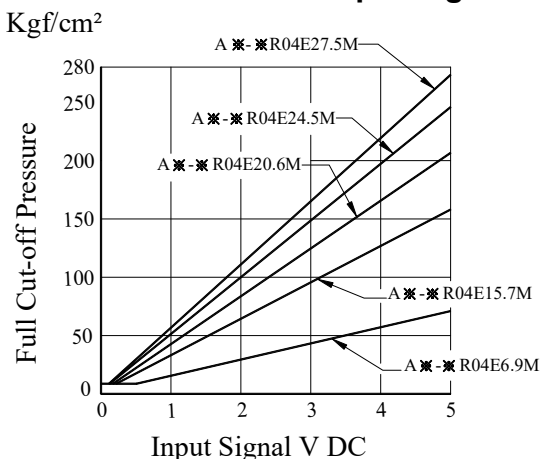

Outboard Pumps

A37 to A145 type pumps, except A16 and A22, can be used as double pumps, by connecting an outboard pump on the cover side. For details consult YUKEN.

Output Flow vs. Input Signal

Full Cut-off Pre. Vs. Input Signal

Note: Pump characteristics at 1800 r/min. is the same as those 1500 r/min. where frequency is compensated. [Refer to page 47 of catalogue EIC-A-1002]

Refer to page 26 to 34 for performance characteristics of pressure compensator type excluding characteristics appeared on this catalogue.

Cable Connection between Pump and Amplifier

The cable connections between the proportional pilot valve and the sensor of the pump and the attached amplifier (SK1106) are shown below.

The cable assemblies are not included in the pump assembly. Purchase separately with model numbers described in the below table, if required.

*1 Cable assemblies are available. When ordering, specify the cable ass'y model numbers from the table below.

Name of Cable Ass'y	Cable Ass'y Model Numbers		
	Approx. Length of Cable mm		
	2000	5000	10000
1 For Solenoid	SK1112-S-2-10	SK1112-S-5-10	SK1112-S-10-10
2 For Power Supply	SK1112-V-2-10	SK1112-V-5-10	SK1112-V-10-10
3 For Pressure Sensor	SK1112-P-2-10	SK1112-P-5-10	SK1112-P-10-10
4 For Tilt Angle Sensor	SK1112-Q-2-10	SK1112-Q-5-10	SK1112-Q-10-10
5 For Signal	SK1112-C-2-10	SK1112-C-5-10	SK1112-C-10-10

*2 For the details of amplifier, see the following page.

Amplifier for Electro-Hydraulic Proportional Pressure & Flow Control Type Pumps (SK1106-★-※-※-10)

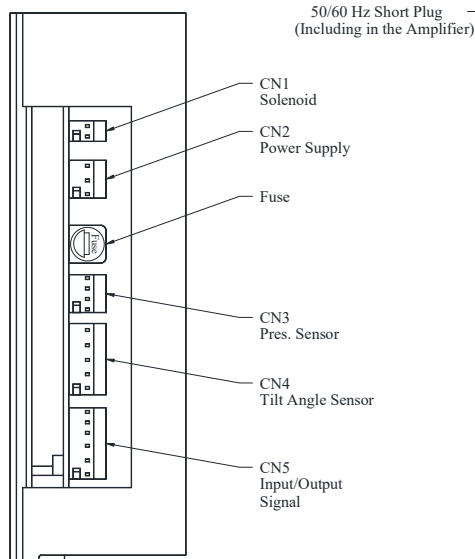

Specifications

Description	Model No. SK1106-★-※-※-10
Applicable Coil Resistance	10Ω (at 20°C)
Input Impedance	10 kΩ (PIN, QIN)
Power Supply	24 VDC (21-28 V Included Ripple)
Power Input (Max.)	30 W
Input Signal	Max. Flow/5V (QIN), Specified Pres./5V (PIN)
Output Signal for sensor monitor	5V/Max. Flow (SMQ), 5V/Specified Pres. (SMP)
Ambient Temperature	0 - 50°C
Approximate Mass.	450 g
